

● Table of Contents

Acknowledgments	vii
Dedication from the Author	viii
Foreword	ix
Preface	x
Safety Procedures	xii
Teacher Background	1
Chemical Engineering	2
Mixing	2
References	5
Section 1: Where Are the Raisins?	7
An Analysis of Raisin Bran (Student Activity 1)	8
Instructor Notes for Student Activity 1	12
Section 2: Understanding the Mixing Problem	15
Peas and Honey: The Importance of Mixing (Student Background 2A)	16
Working Together: The Penicillin Story in Three Acts (Student Background 2B)	18
History of the Glass Industry (Student Background 2C)	22
Overhead 2-1: Historical Illustration of Glassmaking	24
Who Solves the Problems? The Chemical Engineer! (Student Background 2D)	25
Mixing in Many Cases (Student Background 2E)	29
Overhead 2-2: Common Types of Impellers	32
Overhead 2-3: Typical Arrangement for a Mechanical Mixer	33
Section 3: Why Do Particles Segregate?	35
Overhead 3-1: Some Possible Particle Distributions in a Two-Component Solid Mixture ..	36
Why Do Patterns Appear? (Student Activity 3A)	37
Instructor Notes for Student Activity 3A	40
Will Grinding a Sample Improve Homogeneity? (Student Activity 3B)	41
Instructor Notes for Student Activity 3B	43
Will Other Solids Segregate? (Student Activity 3C)	44
Instructor Notes for Student Activity 3C	46
A Particle Race (Challenge Activity)	48
Instructor Notes for the Challenge Activity	49

Section 4: Where Does the Bounce Come From?	51
This Is a Chemical Industry: The Dow Story (Student Background 4A)	52
Where Does the Bounce Come From? (Student Background 4B)	54
Table of Common Polymers (Student Background 4C)	57
How Do We Know If It's Mixed Enough? (Student Activity 4)	58
Instructor Notes for Student Activity 4	61
Section 5: Design a New Polymer Toy	63
Student Research Activity	64
Instructor Notes for the Research Activity	66
